Develop Coding: Assignment

Student Name: Joseph Kenyon

Q1. To create a small non informative website about walruses It will have a couple of pictures of the animal and will have some text. I will make sure to have a "Trello" set up so I can see my progress and what needs to be finished the website will be aimed at anyone who will hopefully find it a fun and funny website.
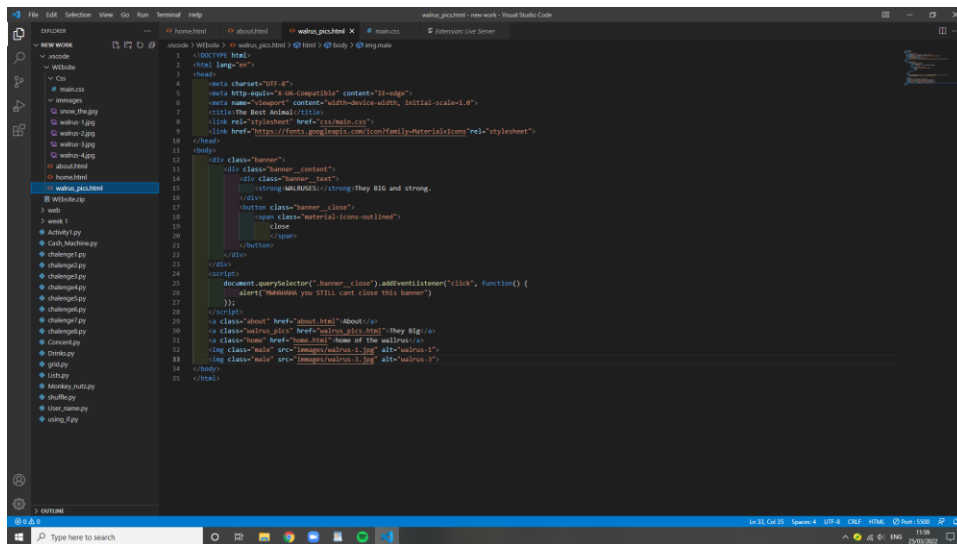

A picture of my trello with the finished outcome

Q2. I will be using a program called VSCode "visual studio code" in that program I'll be using HTML that lets you see what's on the website along with CSS to make the website look nice and make sure things are in the correct place by using flex box.

Q3. To make sure I don't get any copyright climes on my website I'll be using royalty free images and making sure the images I use are friendly for everyone to view as I would like all ages to have a fun time viewing my website.

Q4. I used Visual Studio Code to make my website and it isn't easy as such but there is a lot of help out there on Google from other people who have used it or had the same problems so using it was much easier than it would have been if there was no help out there. Also, my tutor and group were always helping each other when they needed the help.

Q5. To test my website and make sure it worked I used a plugin on VSCode called "Live Server" by Ritwick Dey this allowed me to look at my website in real time and because I was using auto save function it updated the website in real time when I needed to see if it was working. I didn't add any help for people with disabilities but for next time I would add help for blind people so that it would describe what was on the page for them. I used .jpeg so that pictures would show on my website.

Q6. If I was to do anything differently, I would do research on walruses and put some facts in there about them, I would also for the pages with pictures in put more in there and make them look nicer than the ones that are there now as some of them are low quality and very pixelated because of how I have made them. Maybe even have a login system that would email people random facts about walruses if they wanted that to happen.

Q7. My website isn't the best but I would say I am somewhat happy with it as it works and goes to the different pages and they have images on them other than that the website is very bare bones If I spent a little more time on it, I would have just added more pictures and more information.

Q8. Take a screenshot of your website homepage working in two differerent browsers. (Make sure the GitHub Pages link is visible in the screenshot)
